

Hydrophobic Emulsion

OE

Description

Emulsion OE is an emulsion of mineral oil in water. Homogeneous liquid.

- active substance content is not less than 50%;
- funnel viscosity (30-150) s;
- stability when diluted at least 12 h.

Package

IBC in the volume of 1 m³.

Warranty period

Warranty period of 6 months in storage from the date of manufacture.

Application

The emulsion is designed for dedusting and additional hydrophobic treatment of various materials, including glass fiber and mineral wool products. The use of the emulsion prevents the formation of fine dust during production and imparts water repellent properties to materials; improves gas and vapor permeability of the material, accelerates and facilitates its installation.
